

# Doximity Workflows: How to Room Your Patient with Doximity Dialer

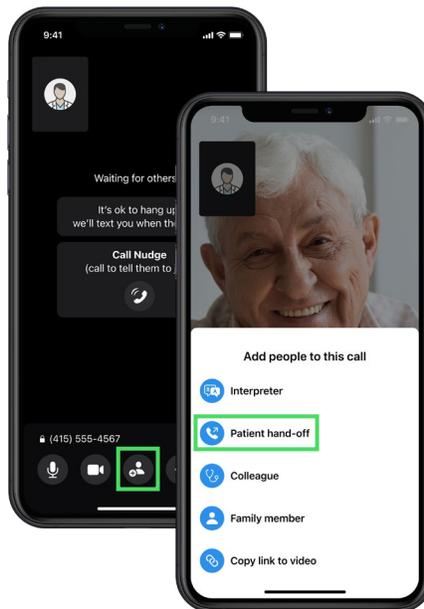

Doximity Dialer is the HIPAA-compliant, easy-to-use telemedicine platform that allows you to meet your patients on any device.

1

Dialer Pro allows admins and other staff members to triage and prep patients before meeting with you.

Admin starts the video visit and gets the patient on the line.

2

Your admin then taps the group calling icon (👥) and "Patient Hand-Off".

They enter your mobile number and tap "Send & Hang Up" to invite you by text to the call.

Your patient holds in a virtual waiting room until you join.

3

You join the call and hold your telemedicine visit with the patient.

After the visit, you have the option to end the call or hand-off your patient to another staff member they need to see. (i.e. scheduling, billing, etc.)
